A "Reality Check" - Business Continuity & Disaster Recovery Analysis, Planning, Implementation, Training, Exercises & more

Sentigy, Inc. has the expertise and experience to develop and implement even the most complex Business Continuity and Disaster Recovery programs. Using a best practices approach taken from the Disaster Recovery Institute International (DRII) and The Business Continuity Institute (BCI) and combining years of expert experience from actual cases, we have developed **Sentigy PathwaysSM Critical Operations Safeguard**. Sentigy can relieve your staff of the burden of "Reinventing the Wheel" thus allowing them to attend to your core business. Sentigy takes an "All Events" approach to BC/DR. We don't focus on just hurricanes or fires etc. but all reasonable and possible disasters. Sentigy will meet with all the stakeholders and departments to cover the ten recognized subject areas within the professional common body of knowledge. These include:

- Project Initiation and Management
- Risk Evaluation and Control
- Business Impact Analysis
- Developing Business Continuity Strategies
- Emergency Response and Operations
- Developing and Implementing Business Continuity Plans
- Awareness and Training Programs
- Maintaining and Exercising Business Continuity Plans
- Crisis Communications
- Coordination With External Agencies

Now that your Business Continuity Plan is completed, you have to exercise it to see if you have gotten all the bugs out? Business Continuity Plans should be tested semi-annually. That gives you time to fix any discrepancies that you may find and bring them to the attention of management and all team members responsible for executing the plan in a real emergency. We have Certified Business Continuity Planners and Project Managers that can design and exercise your BCP or DRP and put it through its paces. Our exercises will help your teams think through the processes and give them confidence in a real emergency. We can exercise a single department or your whole company.

If your organization or business continuity team changes between drills, if you have new people running your data center, operation center, or maintenance groups, they must know and run exercises on the plan to be able to execute it whenever necessary. By using **Sentigy PathwaysSM Critical Operations Safeguard**, we can exercise your BCP or DRP.

Additionally, we will confer with your general council regarding legal and ethical responsibilities to your employees and the communities in which you operate. By being a responsible third party, Sentigy, Inc. will help insure that every reasonable consideration is taken into account for the protection of your employees, your company, the stockholders and the community.
